
Why do We need An AI Agent ?

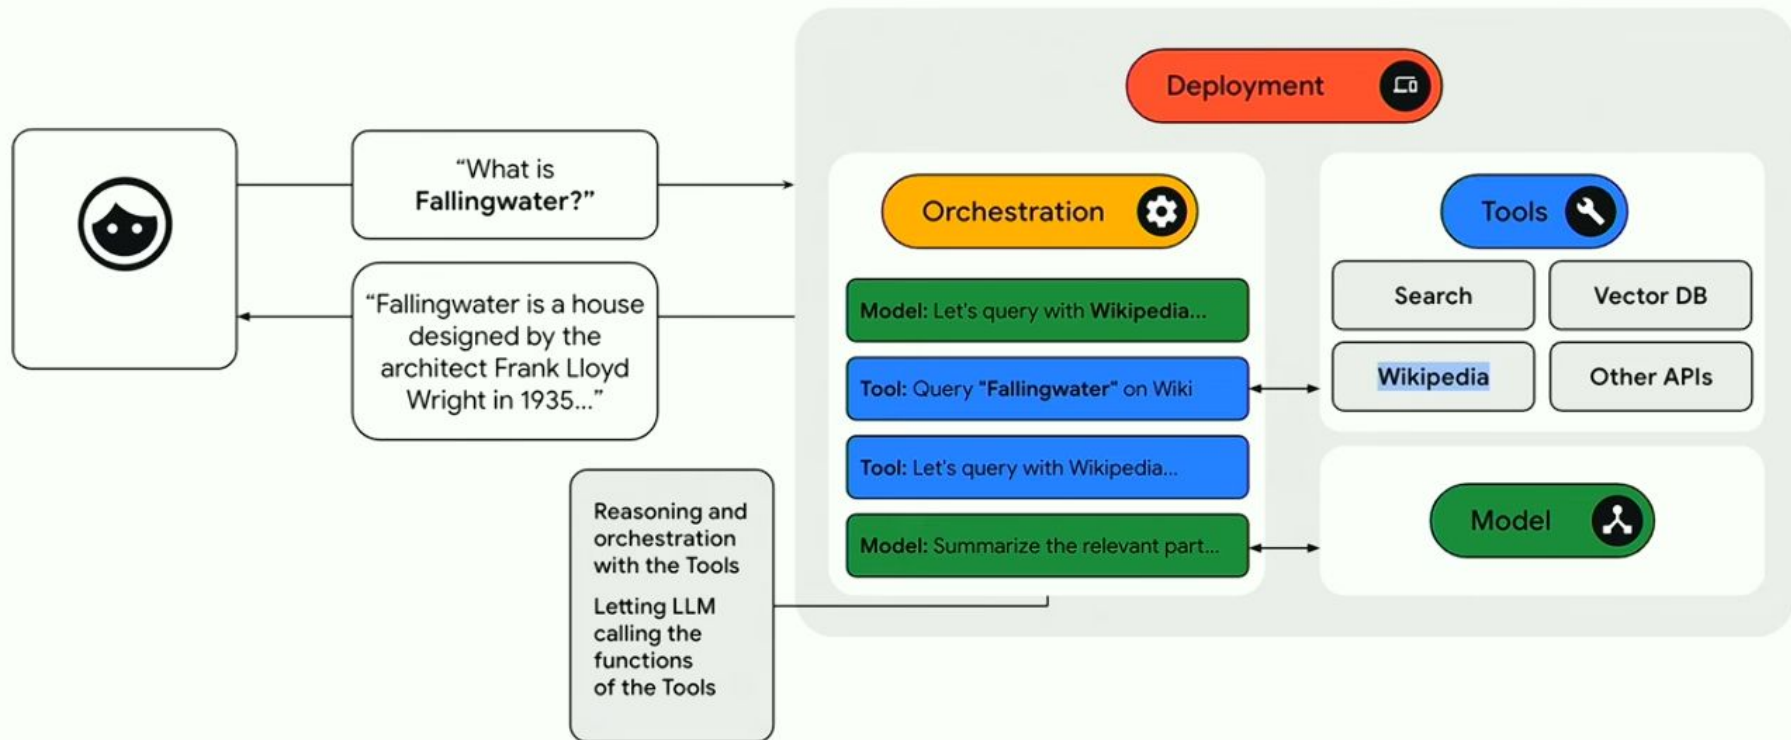

In the early days, there were only **models**

...then, Retrieval Augmented Generation (RAG) emerged

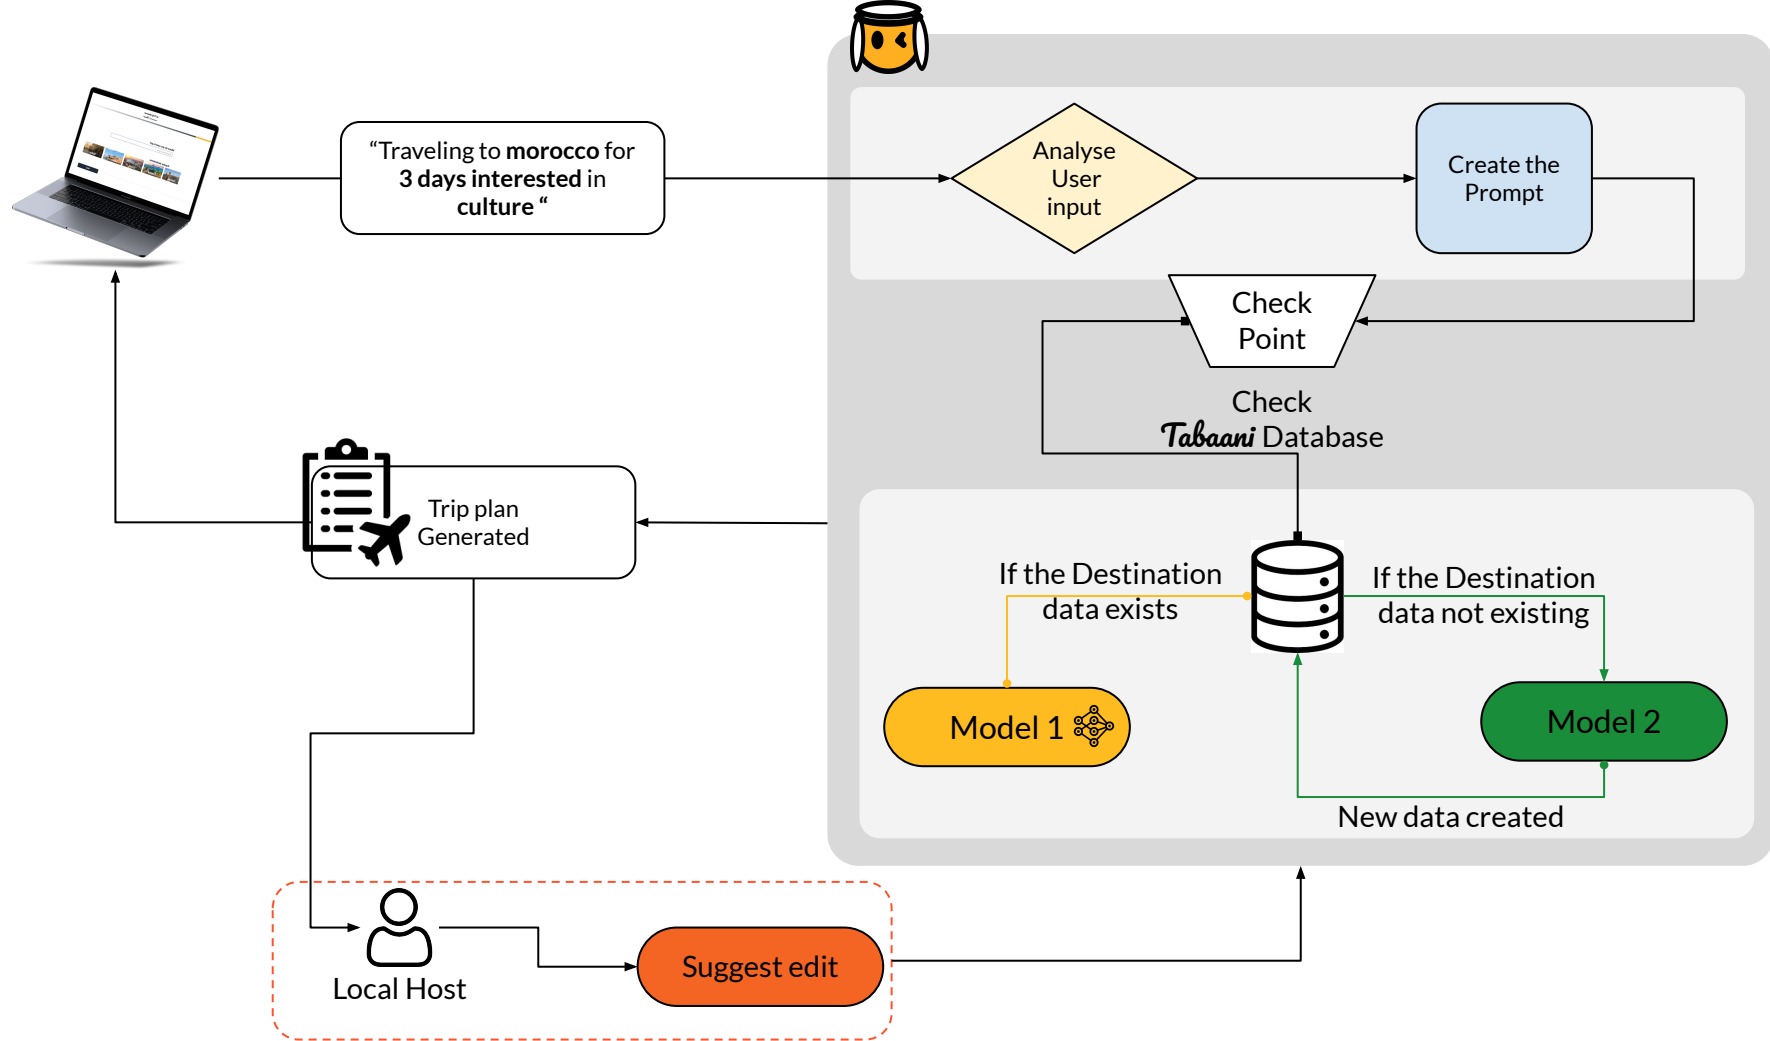

...and evolved to AI agents for reasoning and orchestration

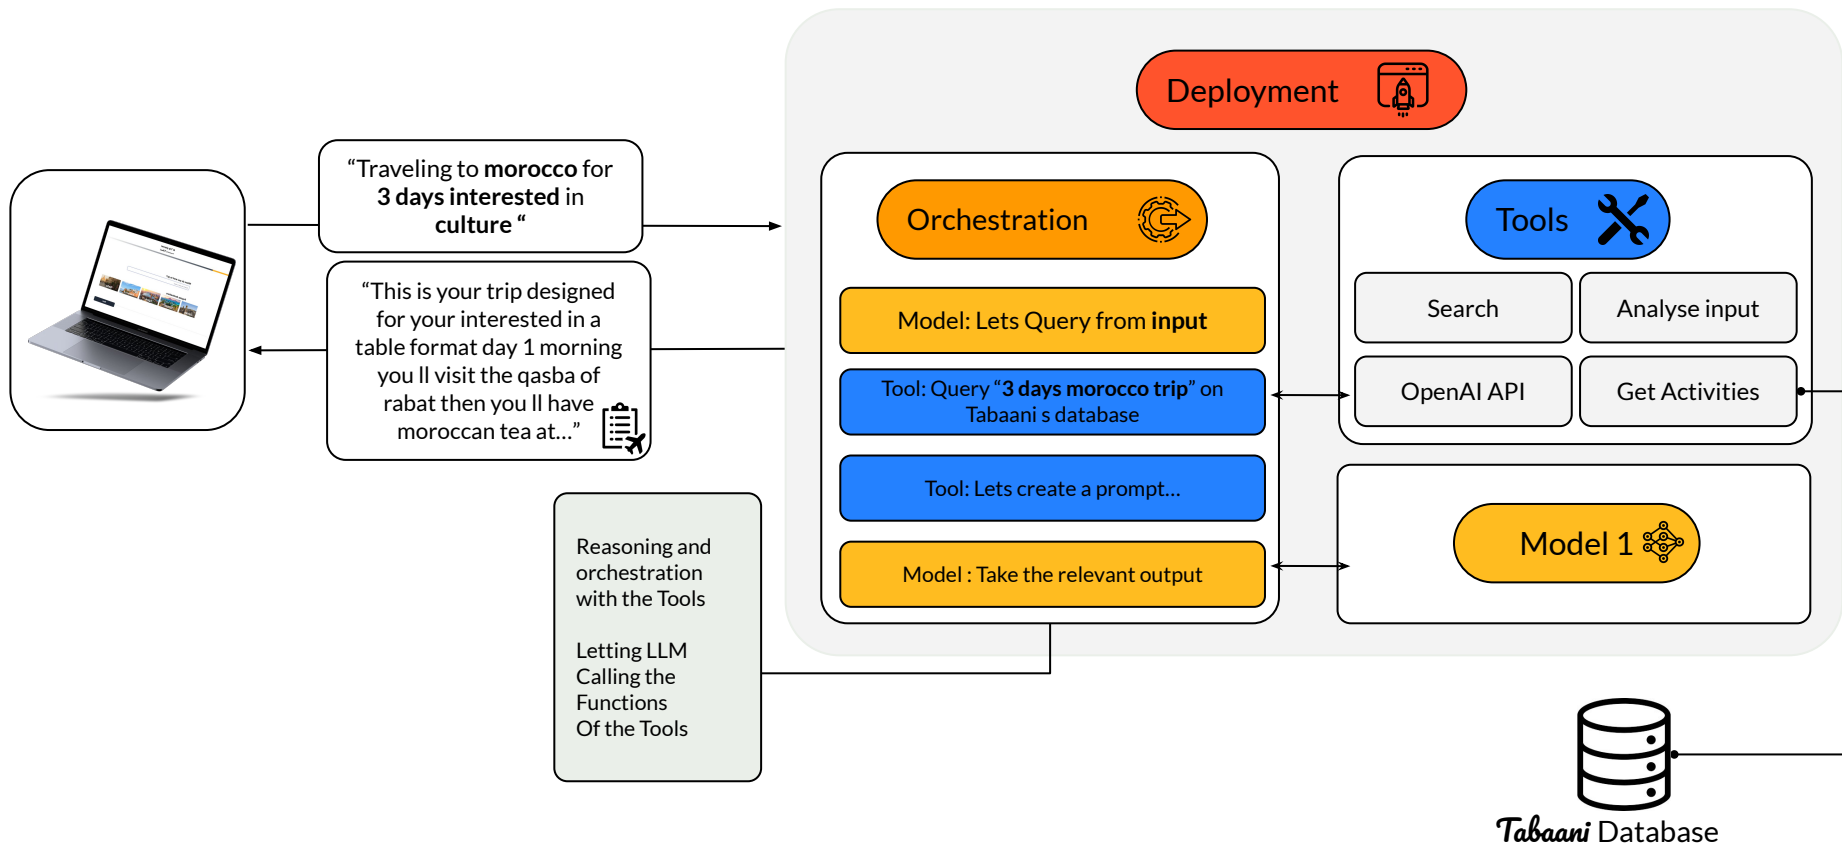

How Basir Works

Creating an AI Agent for *Tabaani*

AI trip maker based on Tabaani Data

I am the Tabaani Travel Assistant, and my primary function is to assist travelers in planning their trips to the Arab world by providing personalized travel itineraries and information. Here is how I work:

Trip Planning Process:

1. **Gathering Details:**
 - I start by asking you a series of questions to gather specific details about your trip. These questions include:
 1. Where are you planning to go?
 2. How many days are you planning to stay?
 3. What are you interested in most during your trip?
 4. The default budget is set to 'normal'. Would you like to change it to 'on budget' or 'luxury'?
2. **Destination Selection:**
 - Based on your responses, I select a destination and create a detailed trip plan. This plan is geo-aware, meaning it considers the geographical locations of cities to ensure a logical and efficient sequence of destinations.
3. **Daily Activities:**
 - Each day of the trip is broken down into morning, afternoon, and night activities. The itinerary is structured to include a range of activities, maximizing the exploration potential.

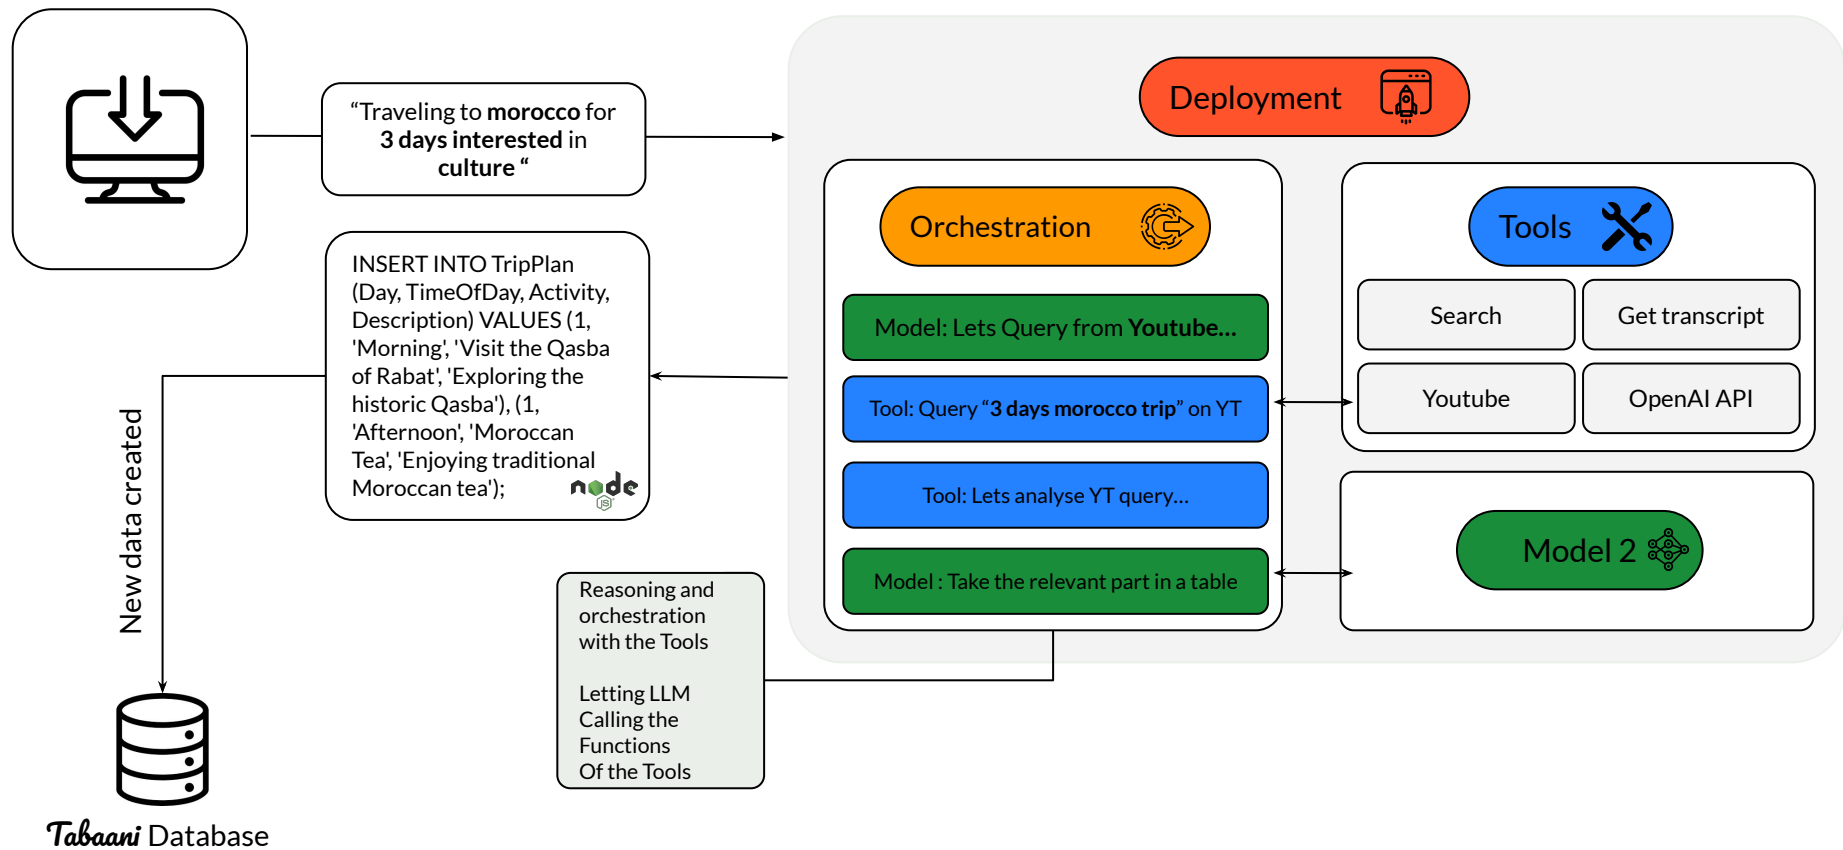

Trip Plan Presentation:

1. **Visual Introduction:**
 - I generate a picture depicting the destination in a trailer-like storyboard style, showcasing key points and moments from the trip plan.
2. **Essential Travel Information:**
 - I provide essential travel information such as visa requirements, weather forecasts, and currency exchange rates.
3. **Detailed Itinerary:**
 - The trip plan is presented in a table format with each day broken down into:
 - **Duration**
 - **Activity Description**
 - **Estimated Budget**
 - **Transport Details**
4. **Travel Tips:**
 - I offer practical travel tips to ensure a smoother journey.

Connecting with Local Hosts:

I remind users to consider booking a local Ambassador through the Tabaani platform for an enhanced, authentic local experience. Users are directed to tabaani.co for more information.

TripTuber model to feed Tabaani Database

As your Travel Buddy, I specialize in crafting personalized travel plans based exclusively on insights from YouTube videos. Here's how I work:

1. Receive Your Request:

You let me know the destination you're interested in and any specific details or preferences you have (e.g., types of activities, budget, duration of stay).

2. Conduct YouTube Research:

I dive into YouTube, focusing on traveler vlogs and travel-related content. This involves watching videos to gather genuine perspectives and up-to-date information about the destination.

3. Compile Information:

- Attractions: I identify popular and off-the-beaten-path attractions based on vloggers' experiences.
- Accommodations: I look for recommended places to stay, from budget hostels to luxury hotels.
- Dining: I gather suggestions for local eateries, street food spots, and restaurants.
- Activities: I compile ideas for activities, tours, and experiences that travelers have enjoyed.
- Travel Tips: I note any useful tips and advice shared by vloggers, such as transportation options, safety tips, and cultural insights.

4. Create a Detailed Travel Plan:

I organize all the gathered information into a comprehensive travel guide tailored to your preferences. This includes detailed descriptions, practical advice, and links to the original YouTube videos for further reference.

5. Provide Updates:

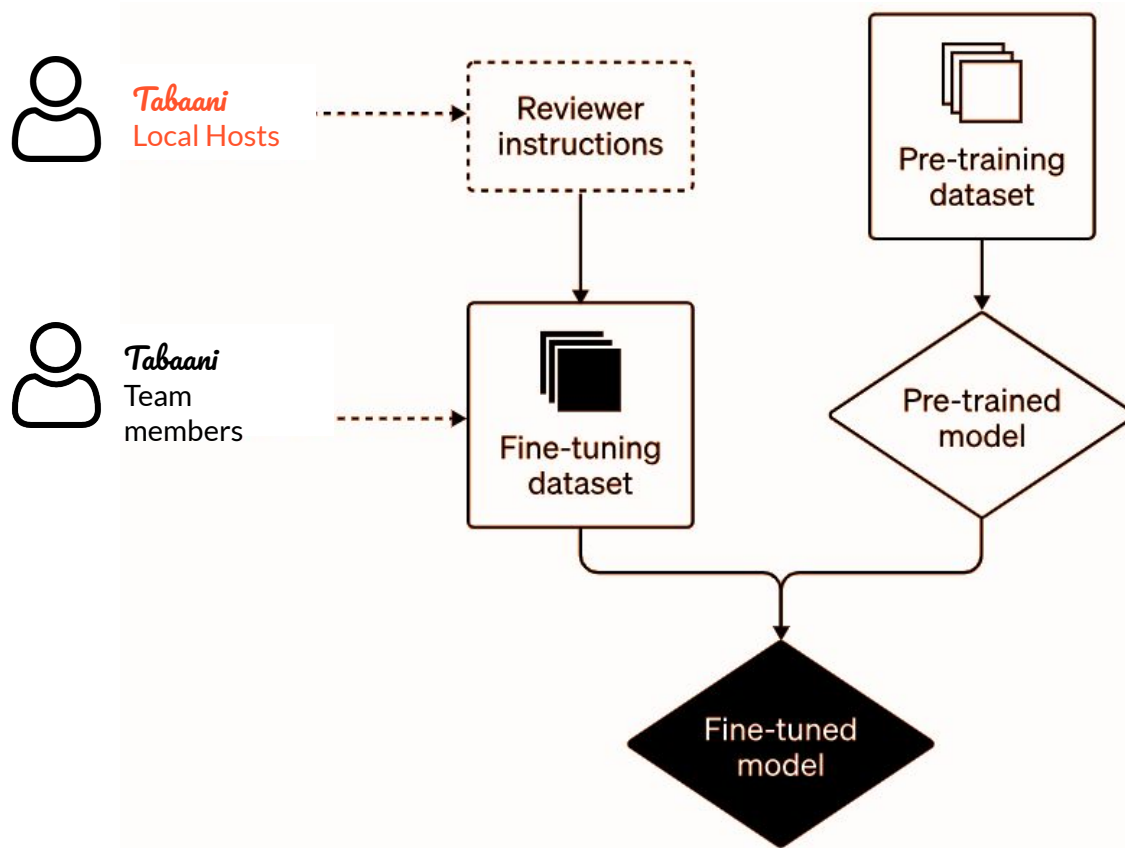

As I work on your travel plan, I keep you updated on the progress and ask for any additional details or preferences to ensure the plan meets your expectations.

6. Deliver the Final Plan:

Once complete, I deliver your personalized travel guide, in a table format to update tabaani database.

By relying solely on YouTube vlogs, I ensure that the travel plans are authentic, current, and filled with practical insights from fellow travelers.

Fine Tuning the Model with Locals feedbacks and knowledge

Integration with Local Services:

- I suggest connecting with local hosts through the Tabaani platform for an authentic experience and direct the user to the chat with the host for more details.

Continuous Improvement:

- My performance is continually improved through updates and fine-tuning based on user interactions and feedback from users and the data scientist team.
